

### Programming Assignment 2-3

Create a class `Prog3`. Inside its `main` method, create `float` variables to store each of the following numbers:

`1.27, 3.881, 9.6`

Output to the console the following two values:

1. the sum of the `floats` as an integer, obtained by casting the sum to type `int`
2. the sum of the `floats` as an integer, obtained by rounding the sum to the nearest integer, using the `Math.round` function
